

LIFLOD International Network

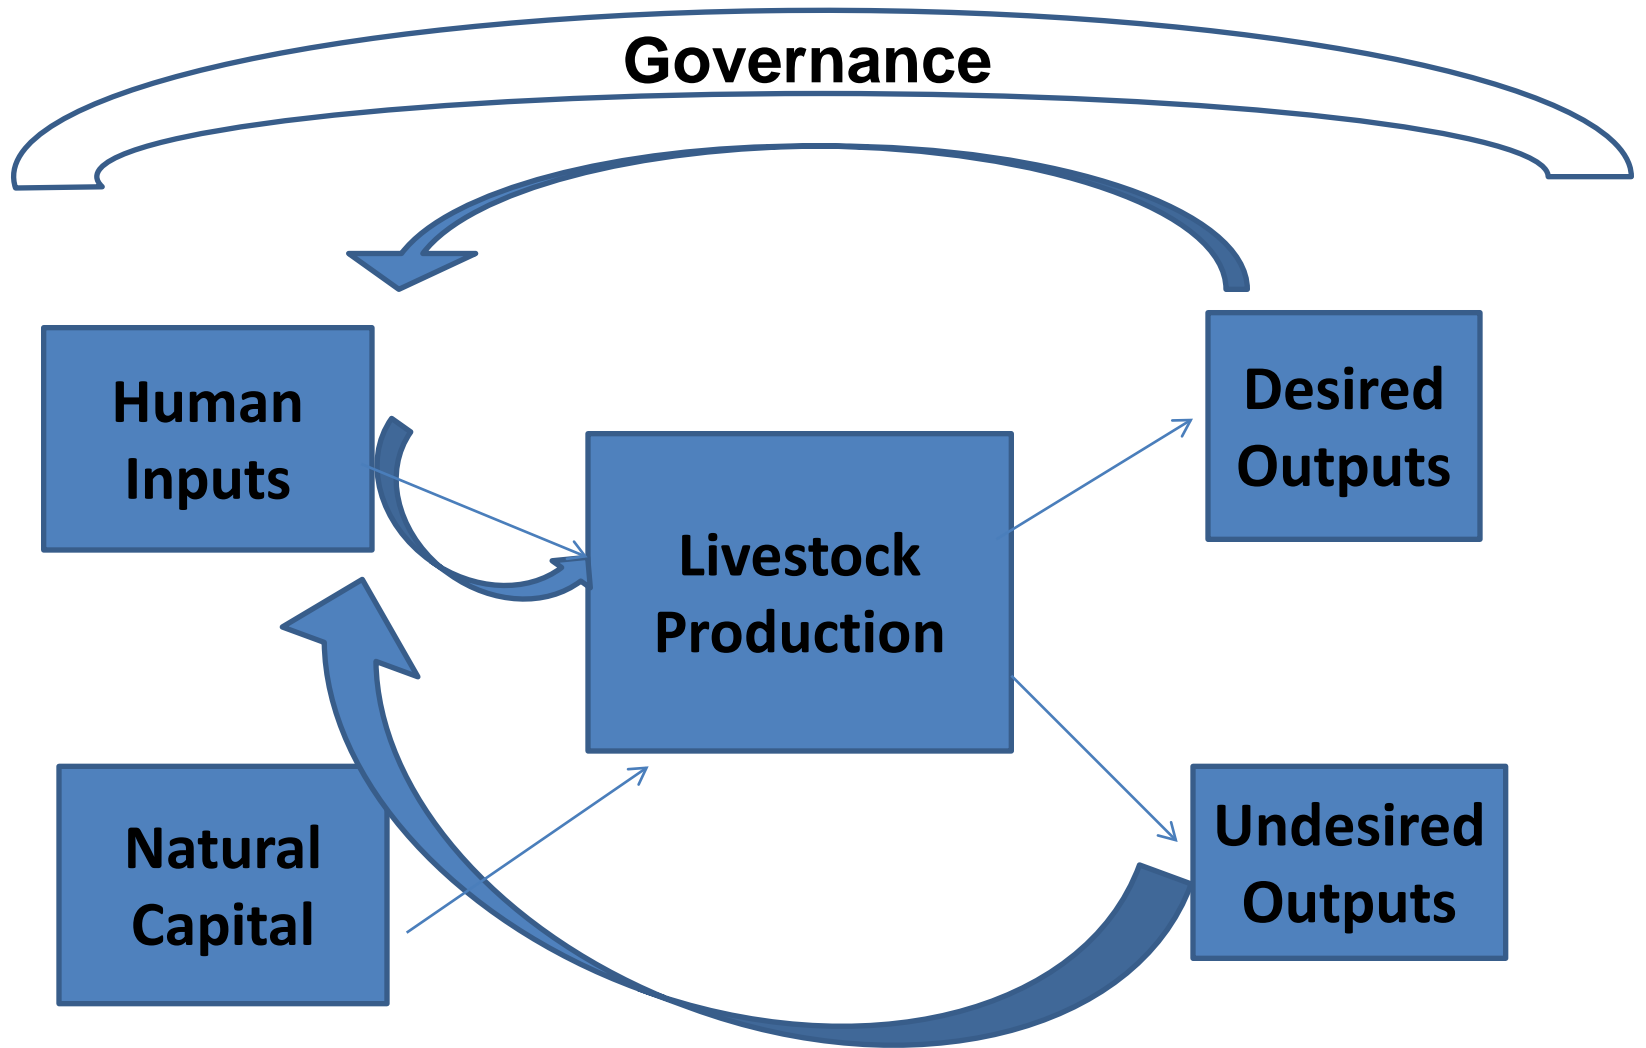

Aim

To contribute to the debate on the **future** of livestock farming, with a particular focus on the **interactions** between livestock farming and local sustainable development

Livestock farming, the integrator

Endorsing several functions that are interdependent

Fit with Henning's framework

Major items linking livestock farming with local development

- Global factor impacts are modified by local context especially what local actors expect from livestock and the functions it delivers to farmers
- The role of diverse livestock systems within the same territory
- Take account of the farms internal dynamics in scenario analysis

Synergies with GAA and actions

- Impact of public policy and sector dynamics on the transformation to new forms of livestock system
- Develop pilot actions related to the themes to enhance the role of livestock in local development
- Frame a global overview of the diversity of livestock farming activities and its contribution to efficiency, resilience to adverse effects , capacity building etc.

Synergies with GAA and actions

- Develop methods to assess the interaction of multiple functions for use in scenario analysis
- Undertake studies to gain an understanding of the actor expectations and associated behaviour and how this influences desired policy and sector outcomes
- Engage with multiple stakeholders to identify present and potential complementarity between systems
