

Practice change

Considerations

- Many good practices that require wider dissemination / sharing;
- Ability to address diverse situations – horses for courses;
- Different levels – integrate – collective action
- Opportunities for triple gains;
- Balance trade-offs / safeguards other socially desirable outcomes

Requirements

- Political push for integrated manure management – including advocacy, policy and platforms;
- Address perverse incentives – including creating incentives
- Public and private investment to catalyze change (private investment on its own not enough);
- Innovation (including technologies) and entrepreneurship;
- Roles and responsibilities of different actors
- Engagement beyond the sector

What the Agenda initiative should do

- Collect, collate, analyze and share;
- Coordination, cooperation and coherence;
- Create knowledge infrastructure;
- Broad engagement – including engagement at the decision making level;
- Facilitate experimentation;
- Facilitate preparation of regional projects for presentation to development banks;
- Facilitate ‘twinning’ of countries;

Break-out groups

- Collect, collate, analyze and share;
- Coordination, cooperation and coherence;
- Create knowledge infrastructure;
- Broad engagement – including engagement at the decision making level;
- Facilitate experimentation;
- Facilitate preparation of regional projects for presentation to development banks;
- Facilitate ‘twinning’ of countries;
- What can you / your country / your stakeholder group contribute to the identified actions? (WHAT and WHO);
- Who else needs to be engaged? (plus WHO);
- Time frame for action (WHEN);
- Where should action focus? (WHERE)
- Which strategy should be used to achieve these actions (HOW);
