Central Nebraska Irrigation Project

Providing farmers with technology to save water

Through a collaboration with Nestlé Purina and the Nature Conservancy, Cargill is providing row crop farmers in Nebraska with first-of-its-kind cost effective irrigation technology that enables them to make more informed irrigation decisions and save water.

The three-year project is estimated to help save 2.4 billion gallons of water.

Digital Supply Chain Solutions

Innovating through traceability and blockchain technology

For two years, Cargill has connected consumers to the farms where their Honeysuckle White turkey was raised. Through this technology, consumers are able to learn about where their food comes from, and learn more about the environment in which animals were raised.

In 2018, more than 200,000 Honeysuckle White turkeys were available to consumers.

Protein with *purpose*

BeefUp Sustainability

Together, we can achieve a 30% reduction in greenhouse gas emissions in beef.*

Grazing Management

Ranchers

Collaborating with ranchers to promote sustainable grazing and increased carbon sequestration

Feed Production

Farmers

Partnering with farmers to reduce greenhouse gas emissions impact of feed ingredients

Innovation

Innovators

Identifying new ways to continue to reduce the environmental impact of beef

Food Waste Reduction

Communities

Working with customers and consumers to reduce food waste
