Global Agenda for Sustainable Livestock

- The big messages from day 1
Review of day 1

- Strategic overview of a national livestock sector, identifying challenges, new opportunities and policy implications
- The dynamics of improving productivity and efficiency while conserving and exploiting unique animal genetic resources
- The elephant in the room: the worries about climate change and the roles of, and opportunities for, livestock
Review of day 1

- The cameos of practical opportunities
  - Land use change to non-livestock land use agricultural enterprises
  - The attractiveness of intensive silvo-pastoral systems, but the challenge of scale
Review of day 1

- Reconfirmation of the central role of livestock in development
- The overwhelming need for change to achieve sustainability and support
- The need to exploit current and new knowledge and experiences to tackle the challenges
The need to ensure livestock sector policies and investments concurrently address the diversity of livestock systems and the diversity of demands and expectations of society. The need for integration
- of knowledge, tools and information;
- of sectoral and disciplinary perspectives, approaches and scales;
- of stakeholder objectives and trade-offs;
- of action towards continuous on-the-ground improvement.
The evolving Agenda approach

- Evolution of the Agenda

Four types of action supported by the Agenda:
- building and synthesising relevant and accessible evidence;
- engaging stakeholders in dialogue to build common understanding and joint action;
- developing innovative approaches and solutions;
- understanding, dissecting and exploiting new incentives for change in food and agricultural systems
